School holiday program for little Einsteins

Can learning be this much fun? This winter, primary school children will attend holiday programs with Extend while being unaware all the fun and experiences are actually great learning opportunities.

Children will have the opportunity to join new science activities on offer at the Extend holiday programs in Melbourne. Focusing on educational fun, children will learn about air pressure, gravity, friction, and angles of incidence through hands-on activities that assist them with the understanding of science. As a high importance is placed on the educational component in child care for primary school aged children, school holiday programs become another educational medium outside the classroom environment.

“Children are unaware that they’re actually learning something worthwhile because they’re having so much fun. We focus on educational fun, which is why we incorporate activities based on science, cooking, sports, crafts and the creative arts to facilitate learning for children”, states Darren Stevenson, Extend Director. “Our holiday programs differ to others because we offer a carefully planned and structured timetable each day. Parents can refer to a specific timetable for each service and know what their child will be learning at a specified time of day.” Extend focuses on the philosophy that it is never too early to equip young children with the skills and experiences to help them be happy and confident.

This winter school holidays young aspiring scientists, sports players, artists and actors are welcome at Extend school holiday programs across Melbourne. Extend school holiday programs run between **Monday 28 June to Friday 9 July** (dates may vary according to program). To enrol or see timetable information visit www.extend.com.au or call the Extend enrolment hotline on 1300 366 437 for further information. Closing dates may apply.
